Schedule to the pleading: Example v Sample (custody of the dog Pixel) [synthetic]

Schedule of lines relied on, per pleaded paragraph

Matter EX-0001 — Example v Sample (custody of the dog Pixel) [synthetic]
Exhibit reference SCH
Court clock Europe/London · **Pipeline run** 75316042b8d254c1 (Factum 0.1.0a0) · **Run date** 2026-10-24

Schedule of the lines relied on, per pleaded paragraph, with the status the assertion register gives each tested assertion (11 assertion(s) of every party, tested by the same rules). 13 distinct message row(s) are reproduced; a row cited under more than one paragraph is shown under each.

Tier is the fidelity of the export format and acquisition route, not a measure of reliability: T1 forensic database extraction; T2 platform or vendor export; T3 user flat-text export. A T3 source cannot show delivery or read times, the original text of edited messages, deleted content or internal message IDs.

Times: every row shows the court clock (Europe/London). The clock of each export is shown beneath it and is the zone declared for that source (the zone of the exporting device; not verified against the device). Factum makes no inference about a clock it was not told.

Each row gives: reference; source, line number (L) and fidelity tier; the time on the court clock with the export clock beneath it (an ambiguous source time is shown as an interval); the sender with party role in brackets; the message verbatim, with zero-width, direction-control and replacement characters shown as ⟦U+XXXX⟧; and its kind (text, media placeholder with hash, call, deleted, edited). Rows in grey are context lines, marked as context; they are not exhibit items. Nothing is summarised and no row is cropped.

Completeness. Completeness statement: 194 messages in the export; 25 coded to an issue; 23 put in; 1 held; 1 decided out; 0 not yet decided; 168 not coded to an issue; 1 severed and 0 held pending review (never exported). Known gaps: WA-1: no delivery or read times; WA-1: original text of edited messages not in export; WA-2: group export from Ada's phone; Ben's and Cal's devices not examined; SG-1: history before 2025-11-01 not in export; SG-1: exporter does not declare the export complete.
